Duration	4 mins 30 secs
Grade	**15.00** out of 15.00 (**100**%)

Question **1**

Correct

Mark 1.00 out of 1.00

In linear search, how is the element searched?

a. By dividing the list into halves
b. By comparing each element in the list sequentially ✓
c. By sorting the list first
d. By using a hash function

Question **2**

Correct

Mark 1.00 out of 1.00

Which of the following is not a limitation of binary search algorithm?

a. There must be a mechanism to access middle element directly
b. Requirement of sorted array is expensive when a lot of insertion and deletions are needed
c. Binary search algorithm is not efficient when the data elements more than 1500 ✓
d. Must use a sorted array

Question **3**

Correct

Mark 1.00 out of 1.00

Finding the location of a given item in a collection of items is called

a. Searching ✓
b. Mining
c. Finding
d. Discovering

Question **4**

Correct

Mark 1.00 out of 1.00

Which of the following is a type of searching method?

- a. Merge search
- b. Linear search ✓
- c. Bubble search
- d. Quick search

Question **5**

Correct

Mark 1.00 out of 1.00

In linear search, if the target element is not found in the list, what is the result?

- a. An error is raised
- b. The first element is returned
- c. The last element is returned
- d. The search is considered unsuccessful ✓

Question **6**

Correct

Mark 1.00 out of 1.00

Which of the following statements about linear search is true?

- a. Linear search can be applied to both sorted and unsorted lists. ✓
- b. Linear search requires the list to be sorted.
- c. Linear search is more efficient than binary search on large lists.
- d. Linear search divides the list into halves.

Question **7**

Correct

Mark 1.00 out of 1.00

Given an array arr = {45,77,89,90,94,99,100} and key = 100; What are the mid values(corresponding array elements) generated in the first and second iterations?

- a. 89 and 94
- b. 90 and 100
- c. 94 and 99
- d. 90 and 99 ✓

Question **8**

Correct

Mark 1.00 out of 1.00

In which situation is linear search more efficient than binary search?

- a. When the list is small and unsorted ✓
- b. When the list is large and sorted
- c. When the list is small and sorted
- d. When the list is large and unsorted

Question **9**

Correct

Mark 1.00 out of 1.00

What is the advantage of binary search over linear search?

- a. Binary search works on unsorted lists
- b. Binary search does not require dividing the list
- c. Binary search can find multiple instances of the target element
- d. Binary search has a lower time complexity on large, sorted lists ✓

Question **10**

Correct

Mark 1.00 out of 1.00

What is searching in the context of computer science?

- a. Determining whether an element is present in a list ✓
- b. Sorting elements in a list
- c. Deleting elements from a list
- d. Inserting elements into a list

Question **11**

Correct

Mark 1.00 out of 1.00

What is the time complexity of linear search in the worst case?

- a. O👎 ✓
- b. O(1)
- c. O(log n)
- d. O(n log n)

Question **12**

Correct

Mark 1.00 out of 1.00

In which type of search is the list divided into smaller sublists during the search process?

- a. Binary search ✓
- b. Sequential search
- c. Hash search
- d. Linear search

Question **13**

Correct

Mark 1.00 out of 1.00

The average case occurs in the linear search algorithm

- a. When the item is not the array at all
- b. When the item is somewhere in the middle of the array ✓
- c. Item is the last element in the array or item is not there at all
- d. When the item is the last element in the array

Question **14**

Correct

Mark 1.00 out of 1.00

What type of search would be most appropriate for finding an element in a list that is frequently updated?

- a. Binary search
- b. Linear search ✓
- c. Hash search
- d. Interpolation search

Question **15**

Correct

Mark 1.00 out of 1.00

If the target element is greater than the middle element in binary search, where does the search continue?

- a. In the middle of the list
- b. At the beginning of the list
- c. In the right sublist ✓
- d. In the left sublist
